TOYOTA IMPACT>>>

Rainwater harvesting in the factory premises is recharging groundwater and replenishing water sources outside the factory too.

Rain Water Harvesting

The total rain water generated in the premises will be collected either in the underground tanks/ open ponds, shallow wells. Drainage network will be designed to store maximum quantum of rain water for reuse and to maintain minimum levels in the ponds at eco-forest. The fish and other aquatic life shall be introduced in all such ponds that hold water and does not dry out during lean season and demonstrate for community awareness campaign.
