TOYOTA

Toyota's forestry initiative in and around the factory premises will ensure clean air in the workplace and will also benefit those living nearby.

Afforestation

TKM is planning for Afforestation activity in large-scale within the premises covering entire periphery. Nearly 34, 000 m2 of the periphery is earmarked for the plantation activity. Afforestation will be done with more than 1,00,000 tree saplings mainly focusing on the native species. The atmosphere is expected with enriched surplus amount of fresh air and enjoyable work-place for teammembers. This also reduces the load on nature due to production activity.
