The healthy existence of butterflies are an indicator of The butterfly park will be TKM's unique way of giving back to the environment.

Butterfly Park

In the non production area, where the rain water ponds exit shall be utilised to create butterfly park measuring one acre. In this park the plant species with aroma and flowers shall be planted to attract maximum number of butterflies. Such park shall surround the water body as moisture is required to maintain temperature for flowering plants with in acceptable limits.

Society

Environment Day Celebrations

TKM is an eminent employer in all regions wherever it has its operations and is ready to support the professional growth to its staff. In addition to its role as an employer TKM is actively involved in the development of areas like culture, education, health and environment.

The company's endeavors are within the legal boundaries - to pursue good relations not only with the authorities with whom we deal but also with the state and central government of India.

Eco-factory

TKM'S vision is to be the best sustainable plant and co-exist with society for long time. Sustainability will be achieved with the best environment technology in production areas, the promotion of large-scale tree plantation, and renewable energy utilization.

The foundation stone for the new plant was laid in August 2008 by the Chief Minister of Karnataka. The new plant has been set up with a dual objective from an operational and environmental point of view:

- For Plant #2 to become the best plant in India.
- To achieve No #1 status in terms of environment and sustainability.
- In order to realize the eco-factory, TKM's EMS concept will take a three-way approach:

This conceptual approach clearly ensures the implementation of sustainability activity through three key-stone items (eco-mind, eco-kaizen, eco-showcase).

Distinctive targets have been established for each key-stone item during design and operational stage.
